

(a) lineup $\rho=+0.146$, $p=6e-06$

(b) single $\rho=+0.019$, $p=0.55$

Exact (Clopper-Pearson) 95% CIs; Spearman rank correlation between stated confidence and correctness. In the lineup, confidence tracks accuracy - accuracy roughly doubles from the lowest to the highest stated level. Under single-text querying it carries no information. Calibration is format-dependent too
